SOBERANES FIRE

CA-BEU-003422

OPERATIONAL PERIOD

MONDAY JULY 25TH 0700 TO TUESDAY JULY 26TH 0700

INCIDENT OBJECTIVES (ICS 202)

1. Incident Name: Soberanes	2. Operational Period: Da	nte From: 7/25/16 me From: 0700	Date To: 7/26/16 Time To: 0700								
3. Objective(s): Management Objectives											
 Provide for and maintain public and first responder safety by utilizing the incident safety analysis process. Protect all critical assets at risk to include the redwoods, historical assets within the affected area, infrastructure and improvements, watershed, and transmission lines. It is the Unified Incident Commander's Leader's Intent to ensure collaboration at all levels of the incident. Be financially responsible for all management and fire suppression tactics. Foster and enhance community and political relationships. All management actions and efforts will be focused on serving, safeguarding and protecting the citizens and natural resources of Monterey. Control Objectives Keep the fire North of the South Fork of the Little Sur River Keep the fire South Mal Paso Creek Keep the fire West of Rancho San Carlos / White Rock Club Keep the fire East of Hwy 1 											
4. Operational Period Command Emphasi Perimeter Control and Structure Defense.	s:		Q								
General Situational Awareness Very Steep and rugged terrain. Dangerous ra	ates of spread.										
5. Incident Action Plan (the items checked	below are included in this Inc	cident Action Plan):

Soberanes Fire Weather Forecast

FORECAST NO: 2

NAME OF FIRE: Soberanes

PREDICTION FOR: 0700 Mon-0700 Tue

UNIT: CA-BEU

SHIFT DATE: 7/25-7/26

TIME AND DATE

Incident Meteorologist- Ryan Walbrun

FORECAST ISSUED: 1900 7/24/16

NWS-Bay Area

WEATHER DISCUSSION: Marine layer will be a slightly deeper at around 1500 feet with perhaps a few degrees of cooling. Big change will be a more southerly wind that will impact most ridges above 2000 feet. In addition a strong southerly wind is forecast along the coast and Hwy 1. Even with coastal fog the stronger winds along Hwy 1 will impact fire behavior along the lower slopes of Div X/Z. Today will be the first time the fire will be under the influence of a southerly wind that will likely be adverse to Div A and areas of Branch I near San Carlos and White Rock Ridge. Relative humidity values will be moist along Hwy 1 but continue to be very dry at elevations above 2500 feet. Winds will ease after sunset as the sea breeze ends. The biggest concern at night will continue to be very poor or even lowering RH values during the overnight and predawn hours. General trend for Tuesday and Wednesday will be warming and drying with marine layer compressing to 1000 feet.

WEATHER FORECAST FOR Monday:

WEATHER: Fog and low clouds on the coast otherwise areas of smoke.

TEMPERATURES: 2-5 degrees cooler. 82-92 above 1800 feet. 65-75 along Hwy 1 in Div X/Z.

HUMIDITY: Afternoon minimums 15-25% above 1800 feet Branch I and II. 45-60% Div X/Z

20 FT WINDS:

RIDGETOP - Southwest turning Southerly 5-10 mph afternoon gusts 15 mph.

Except Southerly 10-15 mph gusts 25 mph along Hwy 1.

SLOPE/VALLEY - Becoming upcanyon 3-6 mph afternoon gusts 10 mph.

Marine Layer: Around 1500 feet along Hwy 1 but little impact for most of the inland Divisions.

WEATHER FORECAST FOR Monday Night:

WEATHER: Clouds and fog along Hwy 1 and below 1500 feet...otherwise clear with areas of smoke.

TEMPERATURES: 59-67 above 1800 feet. 51-57 along Hwy 1 in Div X/Z.

HUMIDITY: Poor recovery 25-40% above 1800 feet except locally 12-20% after midnight

above 2500 feet. Good recovery 80% lower slopes Div X/Z along the coast.

20 FT WINDS:

RIDGETOP – South 6-12 mph evening gusts 15 mph...becoming Southeast 3-6 mph overnight.

SLOPE/VALLEY – Evening upcanyons 4-8 mph gusts 12 mph...becoming light overnight.

Marine Layer: 1200 to 1500 feet but not forecast to spread over most Divisions above 1500 feet.

EXTENDED FORECAST: Warming trend Tue-Weds. Marine layer 1500 feet. Light Southwest winds.

SAFETY INFORMATION: Know your Fire History. Expect active night time fire behavior with poor humidity recovery above the marine lever. Be aware of your elevation. Take weather obs!

FIRE BEHAVIOR FORECAST

ISSUED 1900 HOURS NED Jon Heggie FBAN

WEATHER SUMMARY

Look for a change in wind direction. PLEASE REVIEW INCIDENT METEOROLOGIST FORECAST

OUTPUTS

FIRE BEHAVIOR

GENERAL

This area is extremely prone to changes in the weather due to the influence of the marine layer. The fire behavior will change rapidly with these changes. The fire is burning in a mix of brush, grass and with timber understory. High tree mortality in the area will add to the fuel loading and spotting potential. Despite a normal winter the sustained drought in the previous years has increased the dead to live fuel loading in an area with no fire history. This area is prone to low RH after midnight and should **expect active burning at night**. Where wind and **slope become aligned** expect critical rates of spread and spotting. Fire activity has been increasing the last two operational periods around 1600 this may be present again this operational period. Steep canyons with backing fire will have the potential for rollout and slope reversal.

Probability of Ignition = 88%. Spotting Distance= 1/2 mile

Fine Dead Fuel Moisture = 3-5% Energy Release Component in the fire area are at 90th percentile levels or above.

SPECIFIC

BRANCH I

Divisions A,C,F

With a change in the wind direction, Branch I could see increased activity on the North end of the branch as the wind has more of a Southern influence. Rollout and slope reversal will continue to challenge direct fire control efforts. Areas that have slope and wind alignment can expect sustained runs and short range spotting. Rates of spread in the grass will exceed 200 ch/h and flame lengths will be greater than 18ft. Brush rates of spread will be 80 ch/h and 16ft flame lengths and the timber understory to have ROS of 13 ch/h and 10 ft flame lengths. Look for night winds to decrease but remain out of the South. Rates of spread should decrease but active burning after midnight should be expected.

BRANCH II

Divisions K,M,P

Rollout and slope reversal will continue to challenge direct fire control in these divisions. The expected South wind will help but dry fuel conditions and difficult access will challenge firefighting efforts. The marine layer should not impact Divisions in this branch and active burning should be expected through out the operational period. The two previous operational periods have had increased activity beginning at 1600, resources should prepare for this potential change at 1600. Active burning should be expected after midnight as RH drops. A high amount of tree mortality will also increase spotting potential throughout the branch. Rates of spread in the grass will exceed 200 ch/h and flame lengths will be greater than 18ft. Brush rates of spread will be 80 ch/h and 16ft flame lengths and the timber understory to have ROS of 13 ch/h and 10 ft flame lengths.

BRANCH IV

Divisions T,X,Z

Fire activity should be light in this branch will a heavy influence of the marine layer keeping the fire to a slow backing front moving to the west. The expected south wind could influence the north end of division Z but the marine layer should keep rates of spread low.

AIR OPERATIONS:

- Smoke or fog could make visibility difficult through out the incident.
- Drops on to dead stands of trees could create rollout and widow makers in all divisions
- · Look out shifting winds in canyons and draws

SAFETY

- · Where wind will be in alignment with slope expected increased fire activity
- Expect fire activity after midnight due to a drop in RH, monitor weather every hour
- Dead trees could fall at any time, situational awareness is imperative

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

Incident Information Line: (831) 204-0446 or 211

Incident Media Line: (831) 647-6257

STATUS	
Incident Start Date: 07/22/2016	Incident Start Time: 8:48 am
Incident Type: Wildland	Cause:
Incident Location: Soberanes Creek, Garrapata State Park, Palo Colorado, north of Big Sur	Total Personnel:
Acreage:	Containment:

MEDIA – The California State Penal Code Section 409.5(d) allows the news media to enter scenes of disaster, riot or civil disturbance. Properly identified members of the news media should not be restricted from entering locations specified within the code. However, this does not include crime scenes, private property and does not imply that the news media may interfere with incident operations while they are in the areas of concern. You can get further information about Penal Code Section 409.5(d) at http://www.leginfo.ca.gov/cgi-bin/displaycode?section=pen&group=00001-01000&file=403-420.1

CAL FIRE SOCIAL MEDIA POLICY – When on a CAL FIRE incident you will adhere to the CAL FIRE Social Media Policy, Section 0691. You can get further information about the CAL FIRE Social Media Policy at http://calfireweb.fire.ca.gov/library/handbooks/0600/0691.pdf

PHOTOGRAPHS AND VIDEOS OF INCIDENT – We are in a new era of media. Media no longer means news/broadcast industry, but now refers to anyone that has the capability to shoot video, photographs and post them onto social media sites in a matter of minutes. Unfortunately, we have seen some instances of photographs or videos that have depicted unsafe, unprofessional or embarrassing circumstances which are a serious breach of ethics. When this happens, it reflects poorly on all that are attached to this incident. Posting an inappropriate video, photo or blog comment could expose oneself to unwanted ramifications. It may be unsafe to shoot photos or video and a firefighter who is concentrating on a camera loses their situational awareness.

The Public Information Office would like copies of the video and pictures that you safely took while not in an emergency situation, fire suppression activity or in an overhead assignment. Bring your video and pictures to the Public Information trailer; they will be reviewed and possibly uploaded to our many CAL FIRE social media sites. Remember, we don't want photographs or videos that depict unsafe, unprofessional or embarrassing circumstances, which are a serious breach of ethics. You can also send your photographs and videos to the following email Soberanesfire2016@gmail.com

LOST AND FOUND – The Information Section will manage lost and found items for the incident. If you have lost an item please leave your contact information and what you have lost at the Information Section. If you have found an item on the incident, bring the item to the Information Section with your contact information as well.

MAIL SERVICE – The Information Section will assist you in getting items mailed from the incident as well as receiving items whether it is letters or packages.

CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/ owner.

Fireline personnel- (During mop up operations)

- Use of Pencil Hose and Garden Nozzles with Shut-Offs.
- · Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- · Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

Road Maintenance and Repair-

- · Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc).
- Consider use of tertiary or treated water (sp)

Aviation Operations-

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, 214 form) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/ Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Place on incident map.
- Use alternative or reclaimed water sources when available. Place on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and consider establishing Water Conservation as a Management Objective.
- Consider complexity of water use on incidents. Consider establishing a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance
- · Review this check list and brief daily.

CAL FIRE **INCIDENT MANAGEMENT TEAM WATER USAGE LOG**

EST #					
WATER SOURCE LOCATION	Hydran t	Open source i.e. pond	Tan k	Gallons Used	Property Owner / Contact Number if known **

The intent of this document is intended to track, record and validated the amount of water used on a incident. It's not intended to review the performance of equipment using the water on an incident.

TRAINING SPECIALIST MESSAGE

A Training Specialist is available for trainees on the incident.

All federal, state and local government agency trainees working on position task books will need to register with the Incident Training Specialist in order to receive proper credit for your assignment. We are located with Check-In.

Bring your task book with you.

Training Specialist

Archaeological and Historical Sites Fireline Guidance for the Soberanes Incident

Do not compromise safety for the protection and preservation of archaeological and historical sites. When feasible and prudent:

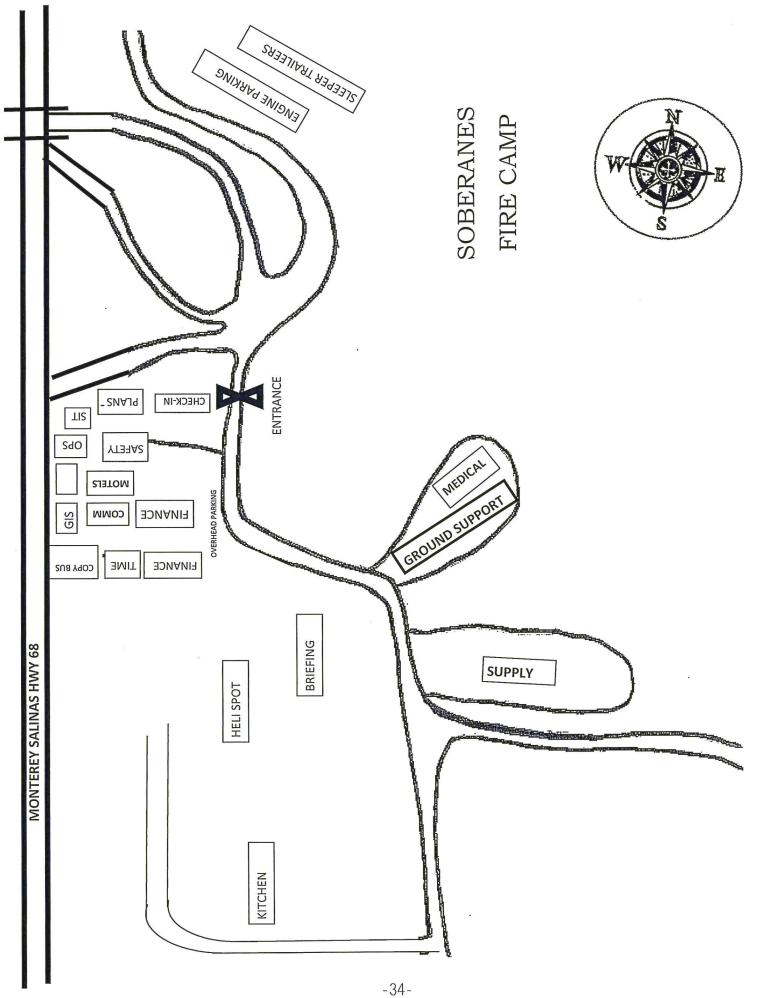

- 1. Be on the lookout for prehistoric and historic sites. Prehistoric archaeological sites include temporary camps containing scatters of obsidian and/or chert flakes that often look like broken glass. More permanent village sites containing circular depressions (house pits), artifact scatters, and dark brownblack soils (midden). These typically occur on flats near sources of water, along ridgetops and saddles, and other such places suitable for camping. Historic sites include old wooden buildings, structures and corrals, rock foundations, wells, and debris scatters. These kinds of resources can be found in the same kinds of environmental settings as prehistoric camp sites.
- 2. No archaeological or historical sites have yet been flagged. If you observe artifacts, features, or sites, attempt to avoid dozing or driving through and/or parking on these sites, if feasible, especially with heavy equipment.
- 3. If you can't avoid sites, minimize disturbance as much as feasible, only clearing the surface to as minimal a depth and width as necessary.
- 4. Leave all artifacts in place. Some artifacts may have been intentionally placed for religious or ceremonial reasons.
- 5. When a site is discovered, flag it for visibility and report its location to the Division Supervisor. If feasible, note locations of discovered resources on a map. Better yet, take a GPS reading. Leave information with the Plans Section so that the sites can be relocated and protected during both the suppression and fire suppression repair phases of the Incident.
- 6. If you encounter a burial or other human remains, cease work in that area immediately and contact the CAL FIRE Archaeologist. State law requires that CAL FIRE then contact the County Coroner, who will then determine if the remains are part of a crime scene. If the Coroner determines that the remains are Native American, State law requires the Coroner to contact the Native American Heritage Commission in Sacramento.

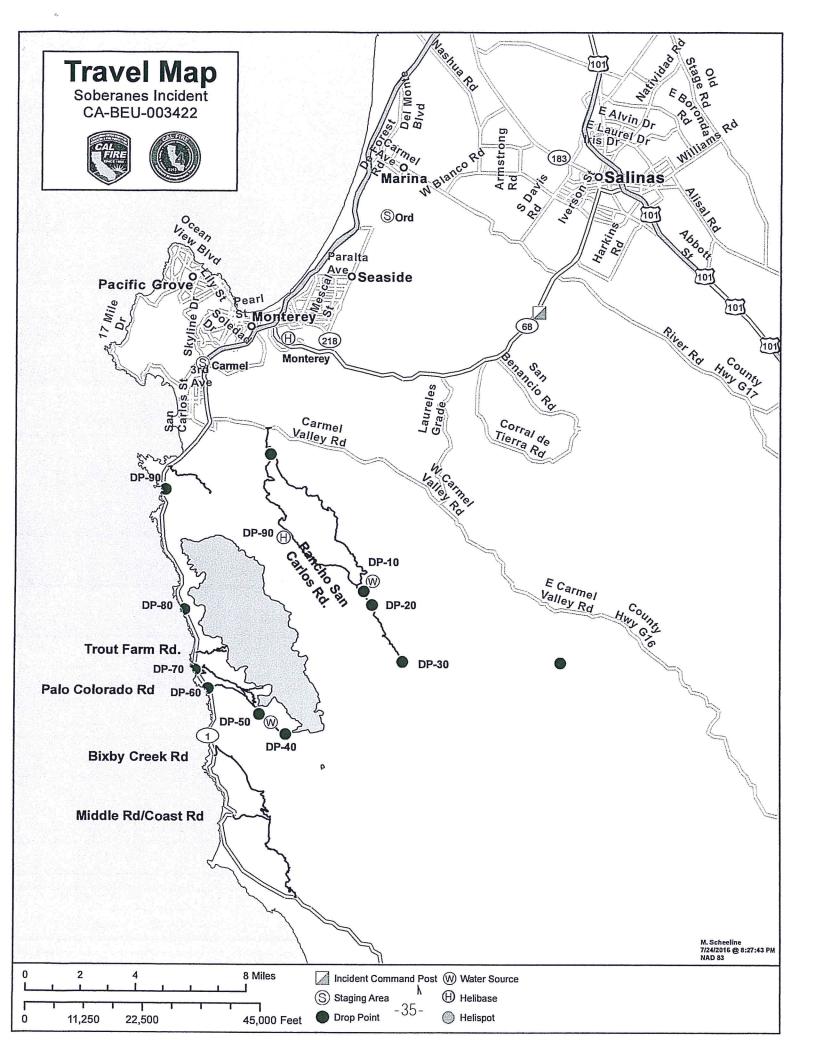

FIRING OPERATION CHECKLIST

Location:							
Da	te: Time:						
Fii	Firing Supervisor						
1.	Personnel Briefing						
	☐ Objectives ☐ Conditions (fire environment) ☐ Resource assignments identified ☐ Firing personnel ☐ Holding forces ☐ Lookouts ☐ Ignition plan/sequence ☐ Communication Plan ☐ Contingency Plan ☐ Safety issues
